Modulbeschreibung

Code 204-002	Modulbezeichnung General Management
------------------------	---

Beitrag des Moduls zu den Studienzielen

<p>Qualifikationsziele</p> <p>The students will get an overview about selected management theories and concepts. The course will enable the students to set-up strategic plan with its specific components.</p> <p>Participants will understand the opportunities and limitations of planning and management techniques. Students will be able to apply management techniques. They learn how to express a well-founded and independent opinion regarding general management issues. Students will develop an answer for the corporate responsibility for society and environment.</p> <p>By implementing the acquired management know-how in a Corporate Strategic Planning Simulation they will improve their analysis and decision-making skills. The company is managed in small teams, which trains their interpersonal and due to the international composition of the MBA, their intercultural competences.</p> <p>Students will understand the interdependencies between various functions of a company, e.g. marketing, sales, controlling and finance. This leads to a comprehensive understanding of the functioning of a company as a whole.</p>
<p>Inhalte</p> <p>The course General Management aims at a comprehensive understanding of management on company level and general principles of business administration. To combine profound theoretical understanding of the main concepts with the skills of application to real life situations, the course is split into a lecture style input class with some exercises and a practical interactive Corporate Strategic Planning Simulation.</p> <p>Concepts General Management has a focus on key concepts of business administration with respect to general management. The course provides a comprehensive, current look at the main facets of business, from the basics of economics, to the global business environment, different kinds of ownership structures, as well as entrepreneurship and small business. The class introduces to the principles of management and organization and embraces ethical issues and social responsibility of business.</p> <p>Corporate Strategic Planning Simulation with a focus on business specific knowledge, skills and competences (e.g. ability to analyze profit and loss statements, decision-making under uncertainty), the understanding of the company as a complex system based on interactive elements like Marketing, Production, Finance, etc. and complex interdependencies to the environment as well as the experience of group working and dynamic group processes.</p>
<p>Lehr-/Lernformen</p> <p>Vorlesung</p>

Beschreibung für die Lehrveranstaltung

Code 204-002	Titel der Lehrveranstaltung Corporate Strategic Planning Simulation
------------------------	---

Ausgestaltung

<p>Qualifikationsziele</p> <p>The course is designed to strengthen professional but as well systemic and social competences.</p> <p>With regard to professional competences students will – based on a short introduction of the relevant knowledge and their knowledge from other courses - strengthen their skills in solving problems not only in theory but in practice. They will have the ability to evaluate and interpret internal and environmental business data incl. the dealing with unforeseeable problems. They will be able to combine knowledge and gained information and apply this to generate suitable business decisions.</p> <p>With regard to systemic competences students will not get a theoretic lecture in systemic theory but a first hand insight in real systemic interrelations between the single elements of a company and its surrounding. They will combine interdisciplinary knowledge in order to solve problems. They will experience the consequences of neglecting single aspects within the interdependent decision frame of their companies and will hereby run through a learning process that will strengthen their competences about complex systemic processes.</p> <p>With regard to social competences students will be faced with the need to bring in their individual knowledge, strength and opinions in the group on the one hand and combine the individual inputs on the other hand in a way so that effective group interaction and processes emerge. This includes the need to harmonize or at least make compatible the individual ways of proceeding and to deal with and to overcome group conflicts. At the final company presentations all group members can test and improve their presentation skills. Summarized the students can test, challenge and improve their social competences.</p>			
Wissen	Kenntnisse	Fertigkeiten	Kompetenzen

<p>Inhalte</p> <p>The course is a cross-sectional approach not only to general management but to many other courses of the curriculum of IM. The course challenges all participants – organized in 4-5 groups each with 4-5 members – to take over the top management of a company competing interactively with other companies for several periods.</p> <p>The Learning Content is very broad and contains (not based on lecturing but on real experiencing)</p> <ul style="list-style-type: none"> - business specific knowledge, skills and competences (e.g. ability to analyze profit and loss statements, decision-making under uncertainty) - the understanding of the company as a complex system based on interactive elements like Marketing, Production, Finance, etc. and complex interdependencies to the environment

- the experience of group working and dynamic group processes
Lehr-/Lernformen
<p>Lehr-/Lernmethoden</p> <p>Following an introductory interactive lecture the teaching method is based both on the usage of the TOPSIM Manager software (incl. a manual), a Corporate Strategic Planning Simulation, and the group working of the single companies acting in the game. The groups are supported by the teaching instructor who is directly available for all kinds of questions during the weekly in-class sections and by mail between these weekly classes.</p>
<p>Literatur/Lehrmaterial</p> <p>Manual of the TOPSIM Manager, Corporate Strategic Planning Simulation (English version)</p>
<p>Besonderes</p> <p>- Course is based on a Corporate Strategic Planning simulation - Intense group working</p>

Ausgestaltung

<p>Qualifikationsziele</p> <p>In this course participants gain an overview of historic roots, developments, and challenges of organizing and managing information in general, and the ongoing rise of personal and networked computing over the last view decades in particular.</p> <p>Participants know how to map, analyze, and conceptualize personal and collective landscapes of devices (phones, tablets, laptops, etc.), tools and services, for creating, sharing and managing digital artefacts and information items in mediated work settings. They are aware of how the ongoing proliferation of networked devices, tools and services, not only impacts their private life, but also fundamentally challenges the operation of organisations at large.</p> <p>To better understand this emerging challenge, participants also gain an overview of classical and modern organisational theories and concepts. They also comprehend the importance and analytical value of such theories and concepts.</p> <p>Participants can compare, analyze and reflect upon contemporary organizational structures in the light of the ongoing development of information technology and the changing nature of increasingly mediated work practices.</p>

------------------------	--

Beitrag des Moduls zu den Studienzielen

Qualifikationsziele

Students who successfully complete the course will be able to communicate financial information after analyzing financial statements.

- Acquire knowledge of business performance and turnover processes with respect to investment, financing and accounting
- Get a sound understanding about the concepts of accounting and their differences
- Obtain an overview on the presentation and disclosure components of financial statements
- Evaluate and analyse entity information and identify data relevant to financial accounting and reporting
- Perform calculations of measurement and valuation of important financial statement positions
- Present results of conversion to international accounting in writing in a (consolidated) financial statement format
- Understand the current legal environment and the auditing approach of an accounting firm
- Understand the different fields of investment and financing
- Understand and apply different forms of debt and equity financing
- Understand the process of structuring and securitisation of off-balance sheet financing
- Define different kinds of cash flows and apply discounted cash flow approaches
- Use table calculation programs for investment and finance calculations
- Be familiar with important approaches of the theory for investment and finance
- Apply these methods to solve typical problems
- Independently learn more sophisticated models

Subject related competences: 50%, Systemic competences: 20%, Interpersonal competences: 15%, Personal competences: 15%

Die Studierenden sind in der Lage, die u.g. Inhalte zu verstehen und anzuwenden. Dabei erweitern sie ihre

Ø Kenntnisse, Fertigkeiten und Kompetenzen im Fach

Die Studierenden gewinnen einen Überblick über die Inhalte einer Bilanz, GuV und Kapitalflussrechnung. Sie erhalten einen Überblick über verschiedene Ansätze der Rechnungslegung im internationalen Kontext. Sie verstehen, welche Auswirkung die Bewertungsansätze auf die ausgewiesenen Gewinne des Unternehmens haben. Sie sind in der Lage, Kennzahlen der Rechnungslegung zu ermitteln und zu interpretieren. Studierende sind in der Lage, Bilanzen und GuVs für gegebene Business Cases aufzubauen.

Ø Kenntnisse Fertigkeiten bezogen auf Systeme

Die Studierenden können die Rechnungslegung als Teil des Finanzmanagements einordnen. Sie verstehen den Zusammenhang zwischen der Rechnungslegung und der Bewertung von Investitionsvorhaben und den damit verbundenen Finanzierungskosten mit Hilfe von Planbilanzen und Plan-GuVs.

Ø Kenntnisse der Selbstorganisation

Die Studierenden befassen sich selbstständig mit Grundlagenliteratur zur Rechnungslegung. Sie sind in der Lage, unterschiedliche Methoden innerhalb der Rechnungslegung zu bewerten.

Ø Kenntnisse im Umgang mit Anderen

Die Studierenden diskutieren in der Lehrveranstaltung mit den anderen Mitgliedern der Gruppe über sinnvolle Lösungen zu den Business Cases.

------------------------	--

Ausgestaltung

Qualifikationsziele

Students who have successfully completed this module, will have extensive knowledge of financial matters that are the basis of corporate decision making. Furthermore, they will have developed an understanding of financial forms and regulations in business and be familiar with financing and investment procedures as well as terms of periodic in- and out-payments. They acquire the skills to adequately apply common methods of static and dynamic investment calculation in business critical situations while using standard PC software.

The knowledge of the respective requirements and applications enables the students to recognize the advantages of certain investments and financing alternatives. They can apply their knowledge and skills in order to develop solutions for new challenges while making use of data processing, in particular spreadsheet analysis.

Wissen	Kenntnisse	Fertigkeiten	Kompetenzen

Inhalte

Basic knowledge and skills to assess investments and financing of investments

Knowledge of facts and data:

Only knowledge of central terminology and basic numerical facts are expected:

- What do we mean with capital?
- How much capital do enterprises and the economy need in Germany and the EU?
- total borrowings in Germany and the EU
- key figures of liquidity
- current and historical interest rates of financial products
- source of information with respect to financial issues

Knowledge of methods: Main learning content is the instruction of financial method skills

- basic concepts of financial mathematics
- comparison of investment alternatives (static and dynamic methods)
- uncertainty of investment planning
- calculation of the need of capital
- financing
- funding
- the Lohmann-Ruchti-effect

- financing scheme

Modulbeschreibung

Code 204-005	Modulbezeichnung Value Chain Management
------------------------	---

Beitrag des Moduls zu den Studienzielen

<p>Qualifikationsziele</p> <p>Besides the knowledge and understanding about the processes in Marketing Management and Supply Chain Management, the students improve their skills and competences in applying commonly used analytic tools and methods. Students will improve their planning competences in both areas.</p> <p>They will improve their personal skills by creating plans and holding presentations and they will furthermore improve their interpersonal competences by preparing and presenting team assignments.</p> <p>The systemic competences are developed with the help of an understanding of the interdependencies between the different supply and delivery processes of a company.</p>
<p>Inhalte</p> <p>The participant will get a comprehensive understanding about the key processes in the value chain, from the understanding of initial customer needs, the development of a marketing strategy, to product creation, material supply sourcing, production planning and implementation, warehousing and delivery to end customers.</p> <p>Whereas the lecture supply chain management is putting a stronger focus on the sourcing and delivery side, the lecture marketing management is focusing on the market related processes.</p>
<p>Lehr-/Lernformen</p>

Ausgestaltung

Qualifikationsziele

To develop an understanding about marketing in general. The ability to use the marketing tools and concepts to create a comprehensive marketing plan for a product or a company.

An improvement of the presentation skills in English language by presenting a marketing plan for a fictional product idea.

With respect to acquired knowledge, students shall be able to discuss marketing issues and to apply the marketing concepts to business situations.

In the end, students will have the competencies to independently apply marketing methods and concepts to new and unfamiliar situations.

Wissen	Kenntnisse	Fertigkeiten	Kompetenzen
--------	------------	--------------	-------------

Inhalte

The course provides an overview about the key concepts of marketing. Prior to going into detail, the unit offers a comprehensive introduction to marketing by delivering an answer to the basic question: What is marketing?

The students learn about the marketing management process (i.e. the analysis of the internal and external environment, strategic business planning, strategic marketing planning, operative marketing planning, implementation and evaluation).

As a team assignment the students will prepare a marketing plan for a new market offering and hold a class room presentation.

Lehr-/Lernformen

Lehr-/Lernmethoden

Lecture in the form of seminars with exercises integrated (individually and in groups). Oral team presentations with MS Powerpoint and other media to the class with feedback.

Modulbeschreibung

Code 204-007	Modulbezeichnung International Business and Management
------------------------	--

Beitrag des Moduls zu den Studienzielen

<p>Qualifikationsziele</p> <p>The participants will develop their management skills and decision-making techniques needed in the context of International Management and International Human Resource Management. Students will develop the ability to apply the concepts to companies operating in the international environment.</p> <p>Skills of HR interview techniques, competences to research a company situation in an international environment, development of the students' attitudes towards their own personal goals, learning about their personal development.</p>
<p>Inhalte</p> <p>The students will get an overview about the challenges of International Management in general and the supporting tasks of International Human Resource Management more specifically. This entails the influence of the international environment on the management decisions of an international corporation. The cultural, economic, political and legal environment will be analyzed to learn about the consequences for companies doing business abroad. The influence of government decisions and regional economic co-operations on the success of business activities will be explained and described by theories and key indicators.</p> <p>In addition to the general management perspective of Cases International Management, the class International Human Resource Management is completing the picture from the perspective of personnel management in an international environment and is a bridging link to the individual employee and MBA-student. Here, the students will work with the key methods of personnel selection and development. The students will have the chance to experience the use of personnel development concepts and career planning for their own further development.</p>
<p>Lehr-/Lernformen</p>

Qualifikationsziele

Students:

- understand the relation between external and internal accounting.
- learn the structure and the methods of cost calculation for different cost categories, cost center and product cost. Methods of direct costing / contribution accounting are explained and contrasted. Comprehension for the complex valued based context in companies.
- apply different methods for the alternative valuation of questions on price strategy, product policy and production procedure
- understand international financial statements and are able to apply them for analysis and decision taking
- understand how financials are created, how to interpret them and how to make useful information for the business out of financial data
- are able to transfer the learned knowledge and tools to other subjects, e.g. marketing, mergers & acquisitions or strategy
- understand the strength, weaknesses and limitations of the tools and concepts which they learned and are able to match theory and reality and understand how models can help in a complex environment
- reach a certain level of general and financial professionalism
- can describe the tasks in the area of international finance management.
- get the knowledge to understand financial issues.
- understand the procedures and products on international financial markets.
- are able to independently develop solutions for financing problems.
- identify opportunities and risks in international finance and critically reflect international market developments.

Inhalte

The students will get an overview about Management Accounting, International Reporting and Control and International Business Finance.

In Management Accounting, students learn to use internal analysis and planning tools as a basis for management decisions in general.

The lecture on International Reporting and Control puts the focus on the understanding, interpretation and limitations of financial statements. Matching theory and reality, furthermore students learn about financial reporting in an international context.

International Business Finance enables students to assess financing options in an international context and its respective risk management

------------------------	--

Ausgestaltung

<p>Qualifikationsziele</p> <p>Students will be able to describe the area of responsibility of international corporate finance management in their own words. They will have the relevant expertise to identify and classify the specific problems in this area. Students will understand the basic processes and products in the modern financial markets. Based on this, they will be able to independently develop solutions to the financial problems in a corporate environment. They can fall back on the knowledge gained of the learned mathematical methods. Students will also be able to assess the opportunities and risks of international corporate finance and global business activity and can critically reflect on developments in international markets.</p>			
Wissen	Kenntnisse	Fertigkeiten	Kompetenzen
<p>Inhalte</p> <p>Students will acquire basic knowledge about the meaning and structure of international financial markets. The investment and financing instruments issued and traded on the financial markets are presented and explained in detail. Particular attention is paid to the analysis of foreign exchange markets, as well as to the transactions and practices observed on them. Based on this, the methods for hedging currency risk are discussed. An important topic in this context is the use of modern derivative financial instruments. The application of the instruments shown and the functional areas of international corporate finance management are practiced on the basis of case studies and in group work.</p>

Modulbeschreibung

Code 204-009	Modulbezeichnung International Value Chain Management
------------------------	---

Beitrag des Moduls zu den Studienzielen

<p>Qualifikationsziele</p> <p>The students will develop their knowledge about international marketing methods for market selection and development. Their intercultural competences will be trained as a personal competence. By solving a large case study in teams, the students also train their project management skills, their presentation skills and their interpersonal competences to work in teams. As this case study is applied to two module subjects, the students also develop their comprehension of cross-functional inter-dependencies between the areas of finance and marketing.</p>
<p>Inhalte</p> <p>The participants will learn how to market products in the international context. There is a special focus on the development of international market opportunities and the related intercultural challenges. Whereas the training of intercultural competence skills is of universal usability, there is a certain focus on marketing and management related application of those skills.</p>
<p>Lehr-/Lernformen</p>

Beitrag des Moduls zu den Studienzielen

<p>Qualifikationsziele</p> <p>Subject related competence:</p> <p>Students will be able to apply important methods and instruments of information acquisition. With the help of electronic media, they will be able to compile the relevant literary sources, bibliographies and documentation needed for scientific work. Furthermore, they will be able to use empirical methods of collecting data as well as the evaluation procedures and ways of presenting results that such methods offer in order to solve problems. Students will be able to employ important systematization techniques, form requirements, various types and usages of visualization and presentation techniques and will avail of a range of interaction possibilities. They will understand the significance of prudent organization in order to effectively deal with complex tasks in written, medial and rhetorical form and can act accordingly. Based on this, they will be able to select information that is relevant for their problem statement and communicate this information systematically under consideration of formal scientific requirements in written and oral form. They will not only be able to apply acquired expertise and methodology, but will also be able to transfer this knowledge in the solving of other scientific problems.</p> <p>Systemic competence:</p> <p>Students will be able to systematically acquire knowledge in other disciplines and to transfer and make use of this knowledge in the solving of complex problems.</p> <p>Interpersonal competence:</p> <p>Students will be prepared to communicate and discuss their knowledge and experience in German as well as English.</p> <p>Personal competence:</p> <p>Students will be able to independently and responsibly organize their work and deal with the tasks they are confronted with in a rational, responsible, systematic and goal-oriented way.</p> <p>Subject related competences: 50%, Systemic competences: 30%, Interpersonal competences: 10%, Personal competences: 10%</p>
<p>Inhalte</p> <p>The students shall deal with complex economic issues effectively, responsibly and efficiently in written form.</p>

Beitrag des Moduls zu den Studienzielen

<p>Qualifikationsziele</p> <p>The students will get knowledge about the different perspectives and levels on which business strategy can be used. Beyond that they will develop a comprehension about the different conceptual opinions taken by renowned authors. Rather than taking a simplistic one theory fits all, towards the end of the MBA program the students have to admit, that there are several contradictory views on a topic, which are seen here as a paradox.</p> <p>By doing so the students keep an open attitude towards continuous learning also beyond the MBA.</p>
<p>Inhalte</p> <p>This course offers the students a detailed definition of „Strategic Direction, Business Transformation“. This term includes aspects like “Strategy Process”, “Strategy Content” and “Strategy Context” that are carefully distinguished in the lecture. To expand the theoretical frame the course explores the issues of “Organizational Purpose” and “Strategic change management”. The students will analyze certain case studies in which the constituent parts of the lecture will be applied.</p>

Modulbeschreibung

Code 204-010	Modulbezeichnung International Supply Chain Management
------------------------	--

Beitrag des Moduls zu den Studienzielen

Qualifikationsziele

Students are able to set supply chain and purchasing management tasks and requirements in relation to other ideas and concepts inside and outside the company and have the necessary knowledge in order to formulate specific problems.

Students can solve supply chain management and purchasing problems in theory and practice by using suitable methods and tools. They should have the ability to plan and carry out these methods and tools to collect, interpret and classify necessary data to meet defined requirements.

Students are able to recognize, analyze, evaluate, discuss and predict occurring problems by using specific methods and combine interdisciplinary knowledge in order to develop (new) solutions. They transfer and adopt various methods in a suitable and effective way in a changing supplier environment and reflect and judge on uncertainty.

Inhalte

This course provides the opportunity to more profoundly study the topics of Supply Chain Management and Purchasing with a special focus on the international aspects.

Supply Chain Management

- Analysis and planning of production networks
- Demand planning and scheduling of lean production systems
- Operative purchasing (ordering, dispatching and expediting)
- Logistics and material flow on different levels
- Sales administration and customer relationship management
- Supply chain controlling and leadership
- Tools and IT systems

International Purchasing

- purchasing function, value contribution of purchasing
- basic elements of purchasing contracts
- contract negotiation
- the sourcing/ RFQ process
- cost estimations in purchasing
- purchasing strategy
- purchasing tools

- negotiation skills - purchasing work in a global environment

Qualifikationsziele			
<p>Initial Situation: Globalization and cost driven competition forces world wide operating companies to integrate and redesign their overall sourcing, production and sales activities. Supply Chain Management departments in large and, increasingly, also in small and medium size companies link all parties that are directly or indirectly involved until the product finally gets to the customer's hands. This includes suppliers, transporters, manufacturers, service providers, retailers and customers.</p> <p>Aim: The course "International Supply Chain Management" starts with current challenges for different companies and branches and shows state of the art concepts for designing and managing complex global supply chains for manufacturing networks, based upon Toyota's lean production principles.</p> <p>Group of Interest: This lecture addresses to students of all backgrounds who are willing to think about solutions instead of problems and who are able to abstract very special unique operations and tasks into general processes upon information and material flows.</p>

Ausgestaltung

Qualifikationsziele			
<p>Ziel des Lehrmoduls ist es, den Studierenden einen Überblick über die sich in den vergangenen Jahren stark gewandelten theoretischen Konzepte des Controlling, über die organisatorische Einordnung des Controlling in das Unternehmen sowie über die Vielfalt der Controllinginstrumente bei der Koordination der Führungsfunktion zu vermitteln. Hierbei werden den Studierenden neben der Theorie Kenntnisse in den wichtigsten operativen Controllinginstrumenten vermittelt. Es werden die Deckungsbeitragsrechnung, die Prozesskostenrechnung, das Target Costing und das Life Cycle Costing vorgestellt und anhand von Fallstudien vertieft. Die Studierenden werden in die Lage versetzt, die operativen Controllinginstrumente zur Lösung betriebswirtschaftlicher Problemstellungen einzusetzen.</p>			
Wissen	Kenntnisse	Fertigkeiten	Kompetenzen
Inhalte			
<p>Grundlagen des Controllings:</p> <ol style="list-style-type: none"> 1. Controlling aus funktionaler Sicht 2. Controlling aus institutionaler Sicht 3. Planungs- und Kontrollfunktion des Controlling 4. Budgetierung (Traditionelle, Better Budgeting, Beyond Budgeting) 5. Informationsversorgungsfunktion des Controlling 6. Kennzahlen im Controlling 7. Controlling in verschiedenen Funktionsbereichen (Produktion, Vertrieb, Logistik, etc.) <p>Entscheidungsorientiertes Rechnungswesen:</p> <ol style="list-style-type: none"> 1. Entscheidungsorientiertes Rechnungswesen und entscheidungsorientierter Kostenbegriff basierend auf den theoretischen Aussagen nach Riebel 2. Grenzplankostenrechnung nach Kilger 3. Modulbeschreibung

Code 204-025	Modulbezeichnung Managing Innovation
------------------------	--

Beitrag des Moduls zu den Studienzielen

<p>Qualifikationsziele</p> <p>In this course students will experience innovation leadership via hands-on development of concepts and prototypes. Students will learn how leaders view and manage the innovation processes in organizations. They will also learn how to create shared value products through a sample of structured innovation processes and strategies including tools from engineering, design, marketing, operations, strategy, finance and management.</p> <p>There are two major goals of this course:</p> <ol style="list-style-type: none"> 1.) To shift from the idea of resource and social <i>compromise</i> to a generative, innovative value creation that considers broad and long-term goals for sustainable profitability and 2.) To train future business leaders in both conceptual and execution strategies modern firms employ in their cross-functional innovation activity. <p>The objectives of this course are the following:</p> <ul style="list-style-type: none"> - Articulate how an organization can use cross-functional teams to integrate community value or shared value in product design - Communicate how to deploy cross-functional teams to identify relevant customers and communities and articulate future innovation opportunities - Communicate how to create new product concepts that simultaneously create customer, business and community value while increasing employee engagement and community investment in new products - Articulate and deeply understand the role innovation leaders play in the success of innovation processes in their organizations
<p>Inhalte</p> <p>This course will be a mix of lectures, small group discussions, hands-on product development techniques, creativity exercises, teamwork and leadership training and a workshop on product innovation.</p>
<p>Lehr-/Lernformen</p>

Voraussetzungen für die Teilnahme

Kenntnisse, Fertigkeiten, Kompetenzen	Ability to read and understand economical, juridical and ethical articles on an academic level

------------------------	--

Ausgestaltung

<p>Qualifikationsziele</p> <p>This provides practical hands-on exercises to learn how to answer the fundamental question: How can we design products for shared value in a market place that focuses almost exclusively on profit? The notion of "shared value" derives from Michael Porter's concept that business impact should have a positive outcome for multiple stakeholders, not just shareholders.</p> <p>The objectives of this workshop are the following:</p> <ul style="list-style-type: none"> · Apply the practice of a structured innovation process based on the deep understanding of the innovation processes that integrate a shared value mindset. · Apply critical innovation leadership principles · Learn how to articulate product concepts and use sketching to communicate ideas · Gain insight into how best to leverage teamwork in innovation and product development 			
Wissen	Kenntnisse	Fertigkeiten	Kompetenzen
<p>Inhalte</p> <p>This module is aimed to supplement the theoretical concepts provided in the concepts part of the module and particularly applying concepts of structured innovation management with the objective of creating shared value.</p> <ul style="list-style-type: none"> · Concept of Shared Value · Job mapping · Customer Centered Innovation Map · Design Thinking · Application of House of Quality · Front Load the Product Design Process
